FLEXIPLUS SERIE 8300

It is an ink developed for flexible substrates, especially PVC and polyurethanes for footwear. It is formulated integrally with polyurethane resins of excellent quality, free of external plasticizers (phthalates, etc.), which gives it a fast drying, excellent adhesion and flexibility. This ink does not contain phthalates and possesses colours free of heavy metal which makes it suitable for painting PVC toys. For situations where greater resistance to rub and solvents is required, 10% of FLEXIPLUS CATALYST must be added. 8340 varnish can be mixed with silver glitter and gold; there is an option for high frequency.

Recommended diluents are:

VINYL REDUCER 9602; RETARDADOR VINILICO 9604 and in case of using catalyst **RETARDANT 160 9607**. The cleaning can be realized with **VINILIC CLEANER 9600**.

RANGE OF COLOURS

Code	Description
8310	White Non-toxic
8320	Yellow Lemon
8323	Yellow Chrome
8324	Yellow Gold Non-toxic
8340	Non-toxic varnish
8350	Orange
8353	Red Carmine Non-toxic
8355	Vermilion Red Oxide

IMPORTANT NOTE

- I. The inks formulated by Pintesint SAICyF must be used exclusively with the solvents and the complementary products that it manufactures for that purpose. Due to the diversity of products in the market, the company is not responsible for the use of the same from another source.
- II. The suggestions and data of this literature were elaborated in good faith, to guide the user. We recall the importance of checking the adaptability of inks and complementary products by testing before starting production. Due to the fact that the conditions of use of the products are not under our control, the present does not constitute a guarantee on the work to be done.
